PROFILE

Software Engineer with a Computer Science foundation and hands-on production experience across backend systems, cloud infrastructure, and machine learning integration. Built and deployed microservices in Golang and Python on Azure, and applied ML techniques in academic and personal projects spanning computer vision and IoT. Comfortable moving across the stack and drawn to problems that sit at the intersection of systems and intelligence — whether that's distributed backends, data-driven applications, or embedded and interactive systems.

WORK EXPERIENCE

Talya Bilişim | Antalya, Türkiye ***July 2024 – Aug 2024***
Software Engineering Intern

- Built and integrated RESTful API endpoints using .NET and C# for a B2B enterprise application, contributing to feature delivery across multiple sprint cycles.
- Containerized services with Docker, reducing manual steps for the team.

Revlo AI | Antalya, Türkiye ***Oct 2025 – Feb 2026***
Backend Development Intern

- Enhanced multiple production microservices in Golang and designed Azure SQL and CosmosDB schemas to enhance user experience by engineering new functionalities.
- Integrated new AI features by elevating the use of a Python SDK wrapper around the Gemini API – standardizing prompt templates and structuring JSON response parsing, reducing time needed to integrate new AI features into the platform.
- Designed CosmosDB and Azure SQL schemas for scalability and enforcing service-level contracts, contributing to stable uptime across staging and production.

PROJECTS

Sign Language Recognition & Translation — Real-time hand gesture recognition system using a CNN trained on custom gesture datasets; classifies ASL signs and translates them to text with MediaPipe landmark extraction as the input pipeline

Solara — Industrial IoT Monitoring Platform — Senior capstone project. Designed and built the backend API layer for a full-stack IoT platform that ingests real-time environmental sensor data (temperature, humidity, mineral values) from edge devices, stores time-series readings, and surfaces anomaly alerts via REST endpoints

EDUCATIONAL BACKGROUND

Akdeniz University | Antalya, Türkiye ***2022 – 2026***
Faculty of Engineering
B.Sc, Computer Science Engineering (English)
Current GPA:3.17 /4.0

ADDITIONAL SKILLS

Languages: Golang, Python, C#, Java, C++
Backend: REST API design, microservices architecture, distributed systems, gRPC, OAuth / JWT
Databases: PostgreSQL, CosmosDB, Azure SQL, NoSQL, MongoDB
Cloud & Infra: Azure (Container Apps, App Service, Monitor, Functions), Docker
Observability: Azure Monitor, structured logging, unit-tested service contracts, error-rate alerting, IoT
AI / APIs: Gemini API, prompt engineering, structured output parsing, LLM integration, Tensorflow/Keras, MediaPipe, OpenCV
Tools: Git, Postman, Ollama
Certifications: CCNA — Introduction to Networks (Cisco, 2025)
Languages: English (C1), Turkish (native)
